Sycamore

# Tree Facts

- Ohio has approximately 99 tree species.
- Ohio is known as the Buckeye State because of the common tree in the state called the buckeye. Its nuts look like a deer's eye—a buck's eye.
- Trees provide shade, beauty, clean air, water, good soil, shelter and food for wildlife.
- Trees are a renewable resource and provide us with products we use every day from firewood, lumber and paper to food items like walnuts and maple syrup.
- The more we learn about trees, the more we can understand, protect and enjoy them.
